

SSP-H

Extra Heavy Duty Slurry Pumps

Handled Liquids

Slurry, highly contaminated, viscous, corrosive and abrasive liquids with solid or fibrous particles.

Technical Data

Discharge Flange _____ DN 25.....DN 350 mm

Capacity _____ up to 3500 m³/h

Head _____ up to 100 m

Temperature Operation _____ -10°C up to +110 °C

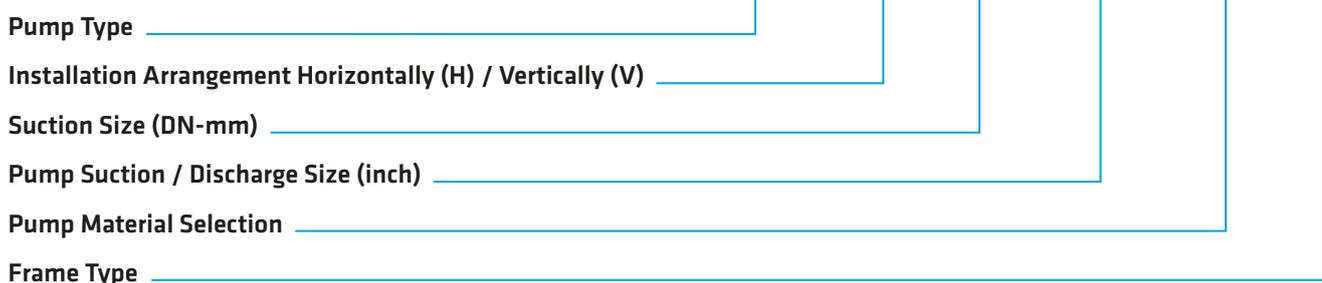

Generating Steam Temperature _____ up to 300°C

Note: The Material of pump differs according to the type of pumped liquid, operating temperature and pressure. Contact for detailed information.

Fields of Application

- Mining and mineral processing
- Sand and gravel processing plants
- Abrasive slurry transfer
- Industrial plants
- Pulp and paper industry
- Cyclone feed
- Mine wastes transfer
- Fly ash and bottom ash transport
- Manure transfer
- Lime mud transport
- Waste water systems
- Chemical slurries
- Filter press applications
- Aggregate plants
- Autoclaved aerated concrete plants

Pump Designation

Design Features

- SSP-H pump series are carefully designed by taking into consideration years of production experience of STANDART POMPA and field experiences of our customers using process and slurry pumps. Hydraulic efficiency and hardwearing are considered and optimized while hard solid particles were pumping.
- SSP-H pump series users are offered with advantages of resistant to extensive wear, high reliability, high hydraulic efficiency, cost effective spare parts and continuous spare part supply in short lead time.

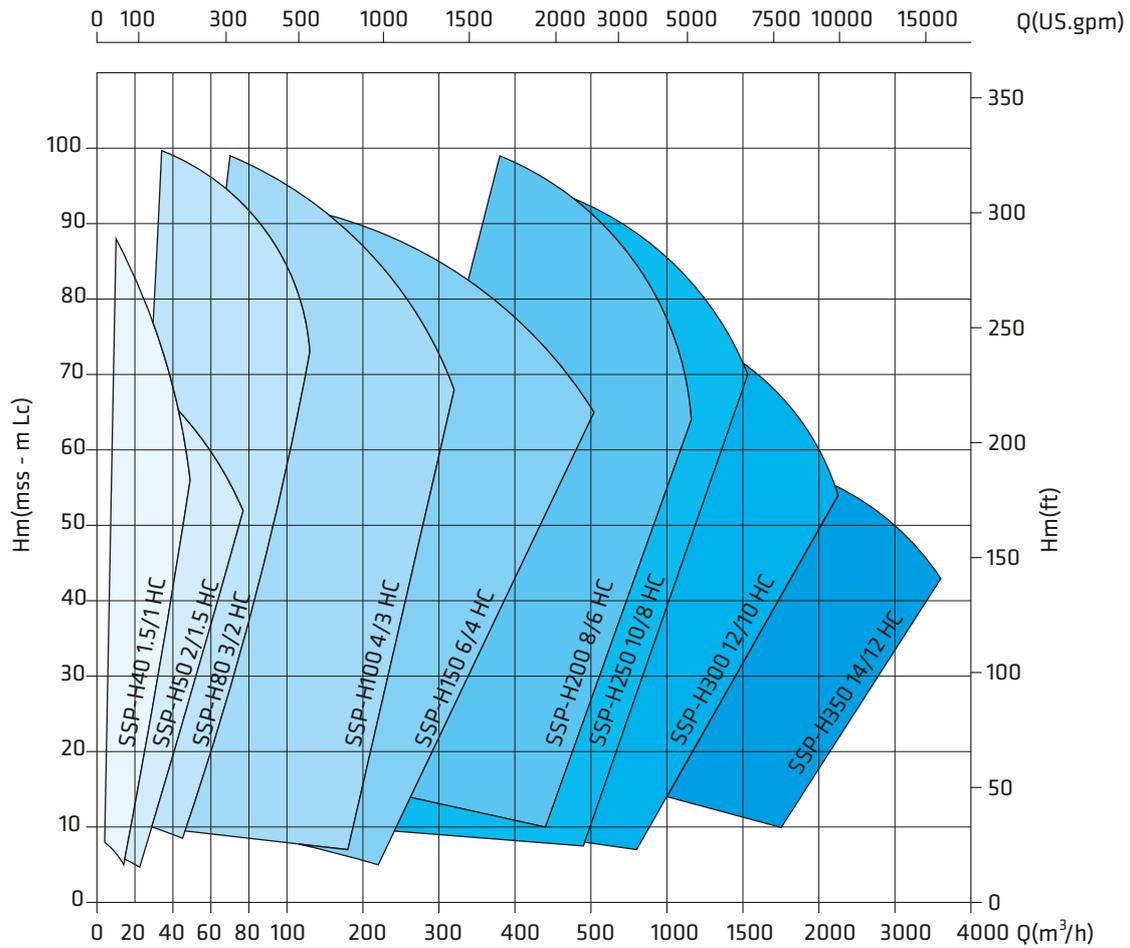

Bearing Design

- SSP-H pump series are produced with extra heavy duty (EHD) design. Grease lubricated bearings of EHD can be replaced with oil lubricated as well.

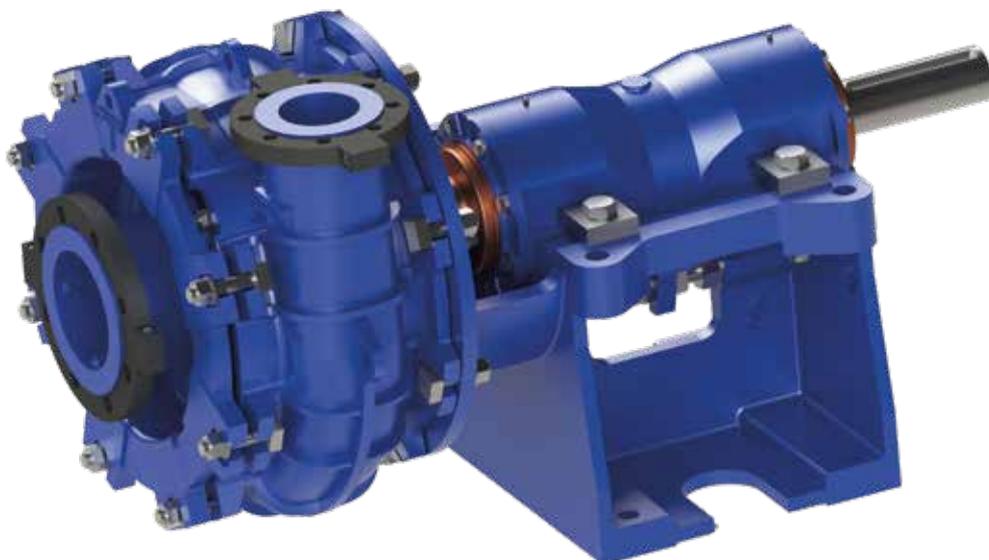

SSP - H 80 3/2 HC K

HORIZONTAL EXTRA HEAVY DUTY SLURRY PUMPS

SSP-H FIELD CHART (HC)

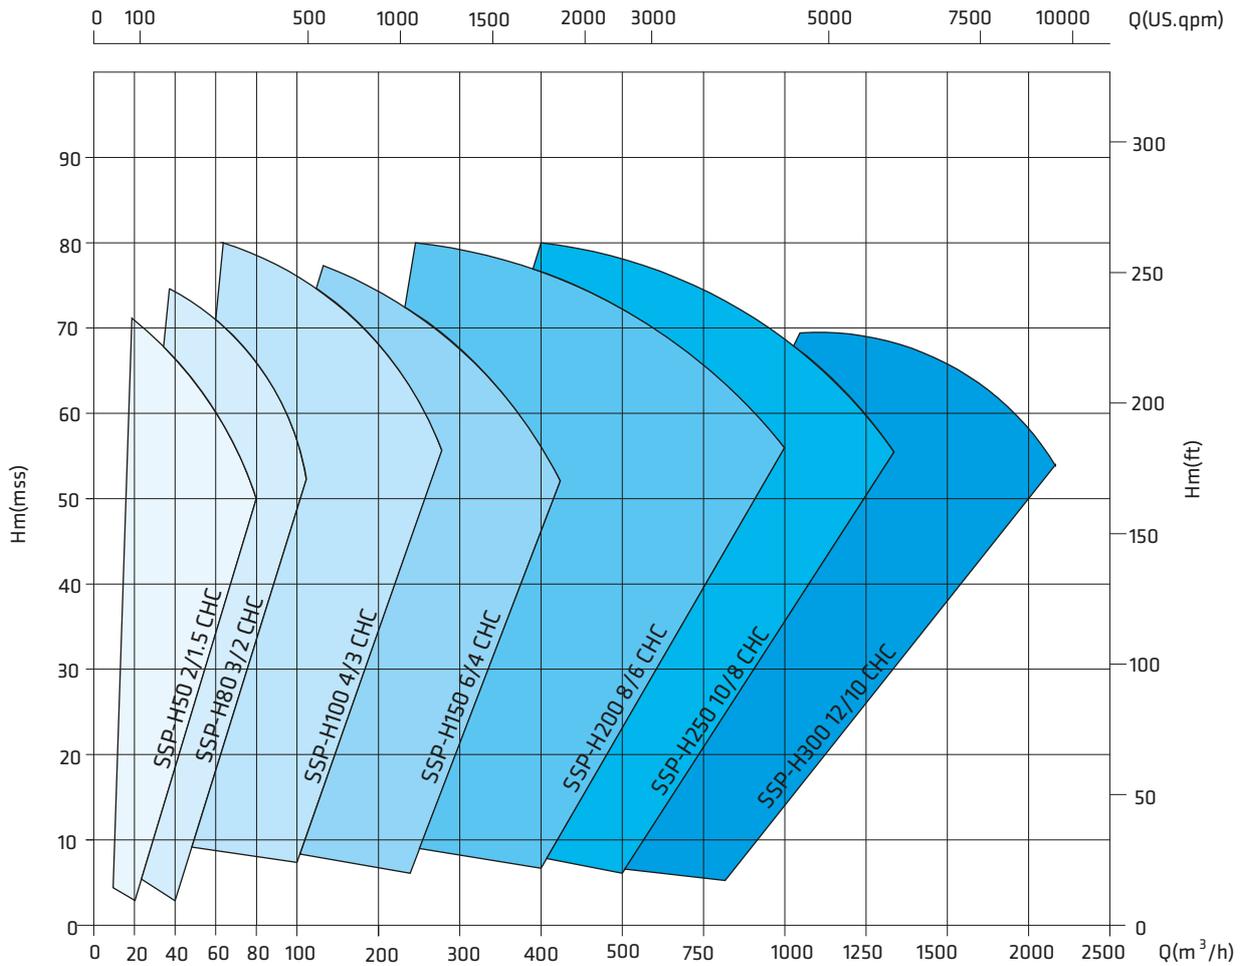

- Impeller and volute of SSP-H HC pumps are high chromium steel casting in standard production. However, different casting material options can be used according to the chemical properties of the fluid.
- SSP-H HC series pump's impeller can be setting with two-way clearance a djustment system.
- There are frame size options for shaft power and applications
- Except H40, H50, H80, H300 and H350, other pumps have 2 different frame sizes according to their motor power.
- In standard production, H 40 an H 50 pumps have open impeller and the others pumps have closed impeller. Pumps with closed impeller can be optionally made as open impeller, vortex impeller or full-recessed vortex impeller.
- Shut-off head is approximately 100m.

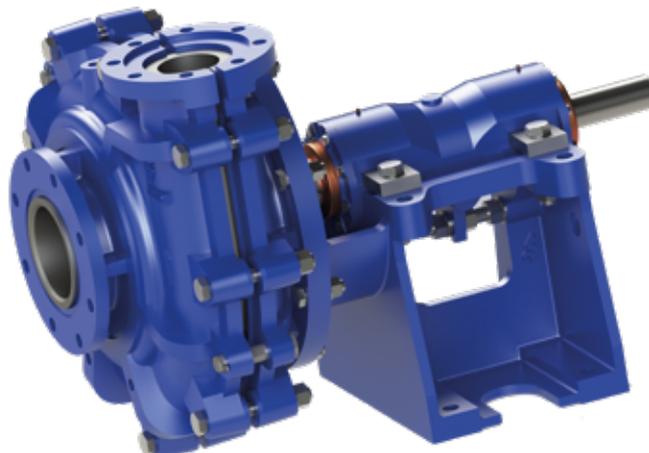

HORIZONTAL EXTRA HEAVY DUTY METAL LINER SLURRY PUMPS

SSP-H FIELD CHART (CHC)

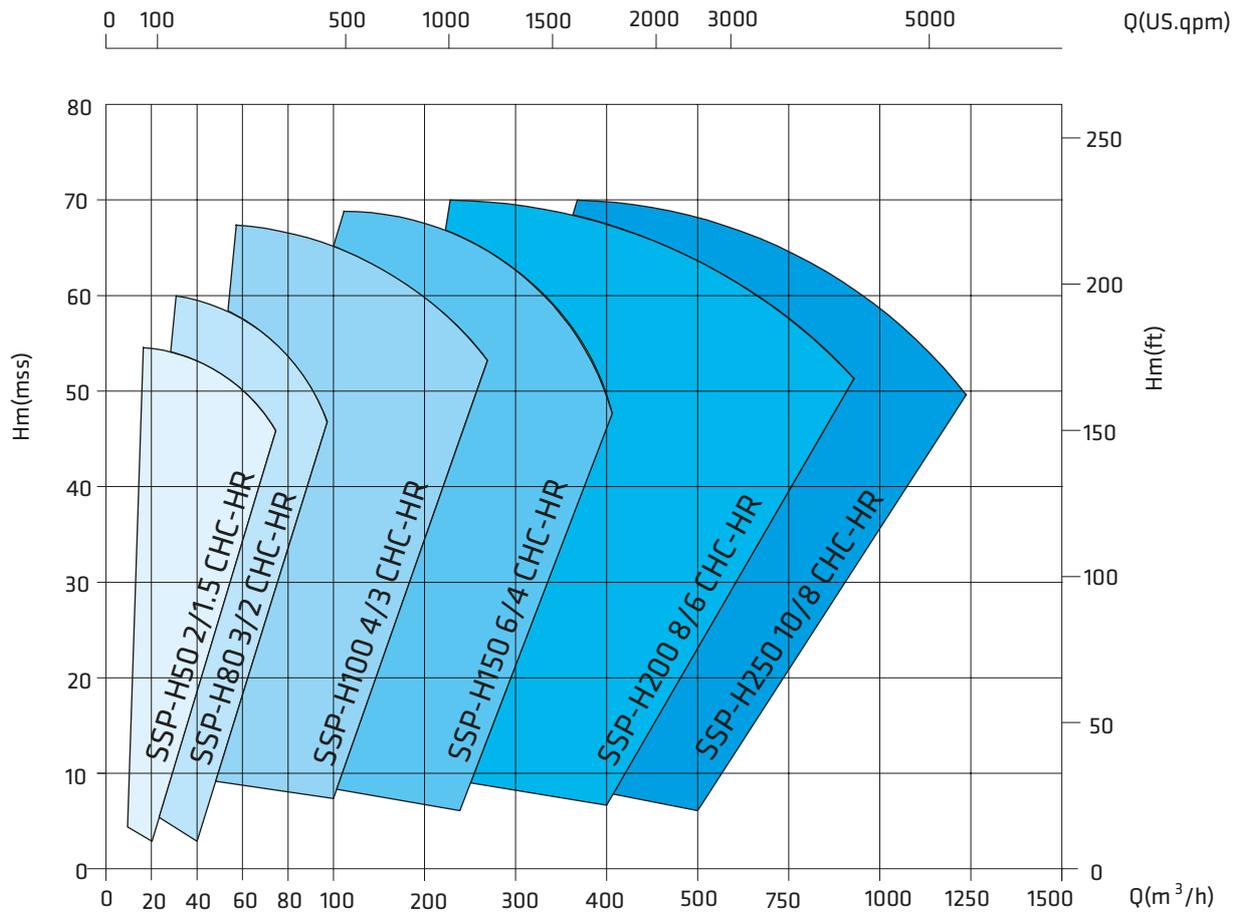

- SSP-H CHC pump series are liner pumps.
- Outer volute is ductile iron with split casing.
- Impeller and volute liner of SSP-H CHC pumps are high chromium steel castings in standard production. However, different casting material options can be used according to the chemical properties of the fluid.
- SSP-H CHC series pump's impeller can be setting with one-way clearance adjustment system.
- There are frame size options for shaft power and applications
- Except H40, H50, H80, and H300, other pumps have 2 different bearing sizes according to their motor power.
- In standard production, H 50 pump have open impeller and the others pumps have closed impeller. Power with closed impeller can optionally be made as open impeller.
- Shut-off head is approximately 80m

HORIZONTAL EXTRA HEAVY DUTY METAL LINER SLURRY PUMPS

SSP-H FIELD CHART (CHC-HR)

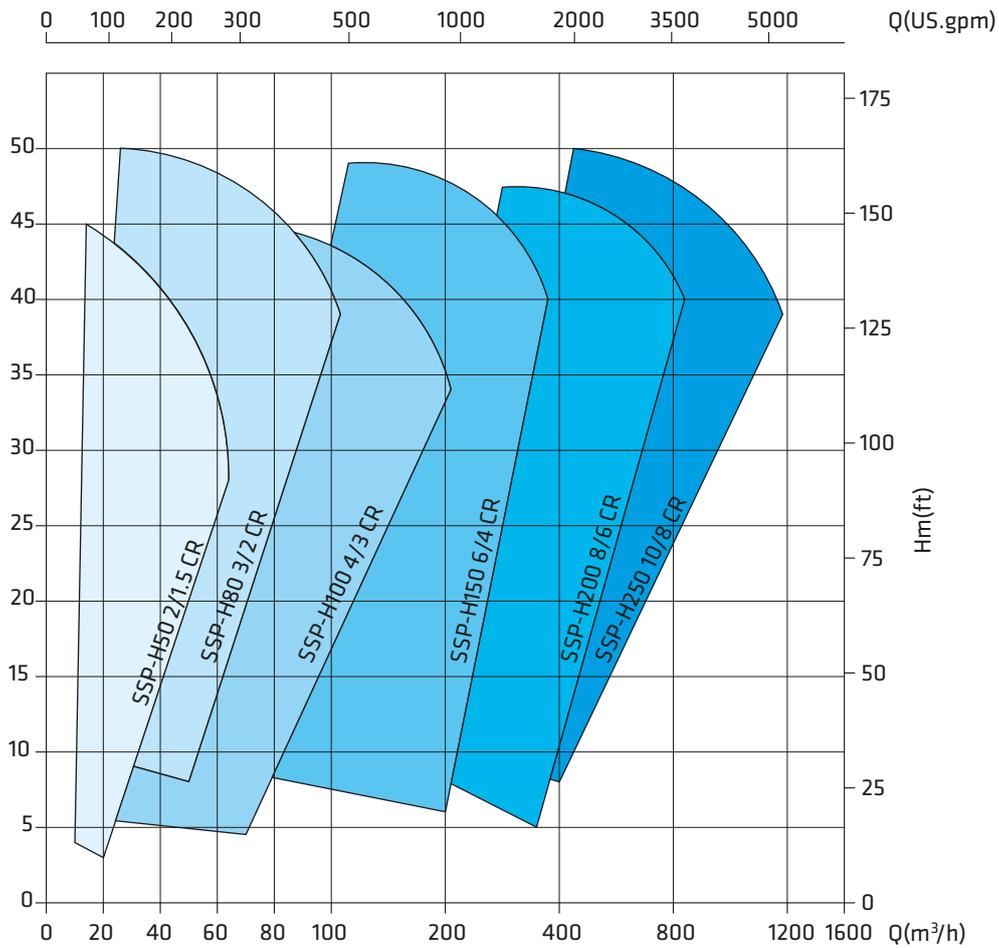

- SSP-H CHC HR pump series are liner pumps.
- Outer volute is ductile iron with split casing.
- Volute liner of SSP-H CHC HR pumps are high chromium steel casting in standard. However, different casting material options can be used according to the chemical properties of the fluid.
- The impeller rubber-coated
- SSP-H CHC HR series pump's impeller can be setting with one-way clearance adjustment system.
- There are frame size options for shaft power and applications
- Except H50 an H80 other pumps have 2 different bearing sizes according to their motor power.
- In standard production, H 50 pump have open impeller and the others pumps have closed impeller.
- Shut-off head is approximately 70 m

HORIZONTAL EXTRA HEAVY DUTY RUBBER LINER SLURRY PUMPS

SSP-H FIELD CHART (CR)

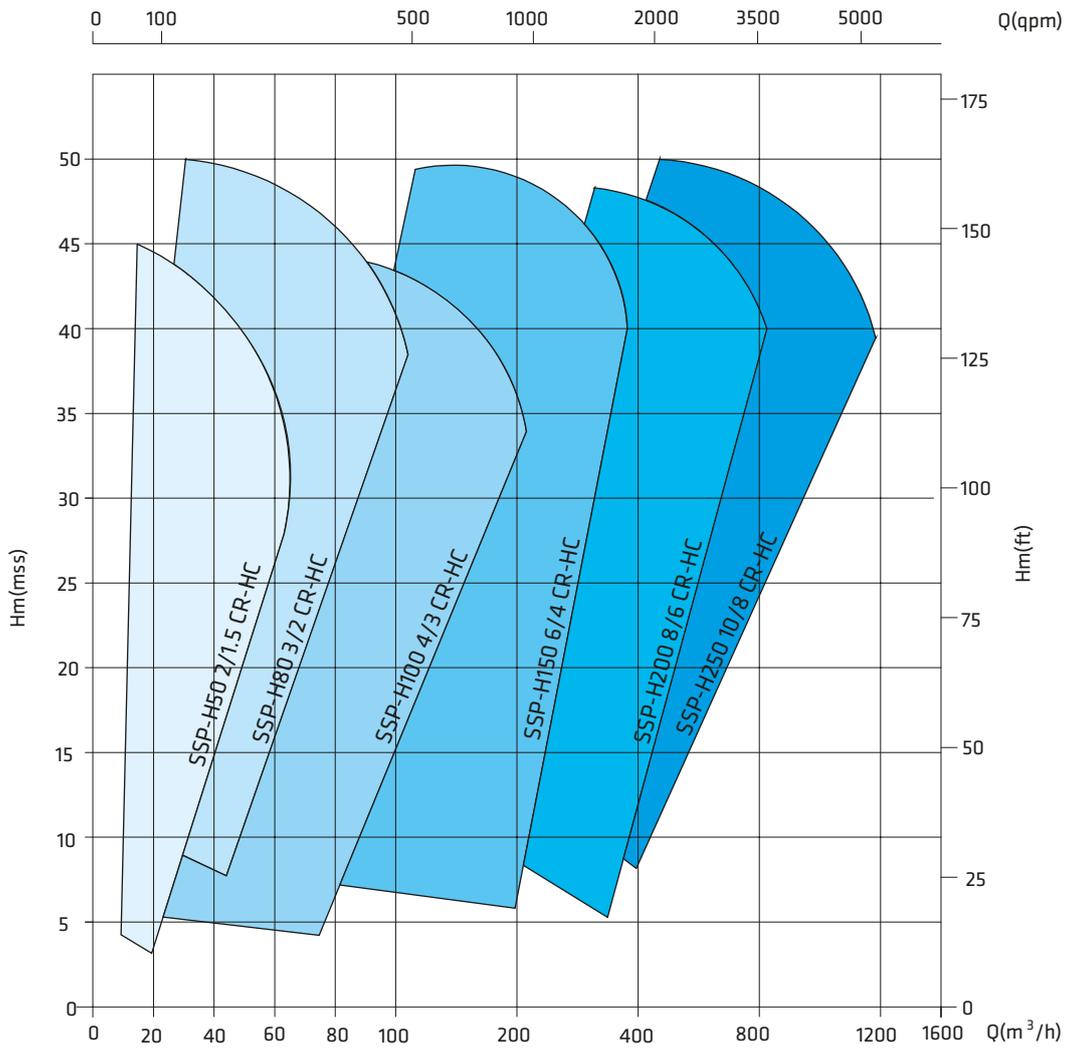

- SSP-H CR pump series are liner pumps.
- Outer volute is ductile iron with split casing. The impeller of the SSP-H CR pumps is rubber-coated and the liner volute is rubber.
- SSP-H CR series pump's impeller can be setting with one-way clearance adjustment system.
- There are frame size options for shaft power and applications
- Except H50 and H80 other pumps have 2 different bearing sizes according to their motor power.
- In standard production, H 50 pump have open impeller and others pumps have closed impeller.
- Shut-off head is approximately 50 m

HORIZONTAL EXTRA HEAVY DUTY RUBBER LINER SLURRY PUMPS

SSP-H FIELD CHART (CR HC)

- SSP-H CR HC pump series are liner pumps.
- Outer volute is ductile iron with split casing.
- Volute liner of the SSP-H CR HC pumps is the rubber.
- SSP-H CR HC series pump's impeller can be setting with one-way clearance adjustment system.
- There are frame size options for shaft power and applications
- Except H50 and H80 other pumps have 2 different bearing sizes according to their motor power.
- In standard production, H 50 pump have open impeller and the others pumps have closed impeller.
- Shut-off head is approximately 50 m.

Impeller Types

As standart manufacturing, SSP-H pump series have horizontal, volute casing, single stage and closed impeller. Semi-open vortex and full-recessed vortex impeller types can be applied in different requirements.

Closed Impeller (Standart)

Kapalı çark akışkanlardaki küçük ve orta boyutlu katı parçaların transferi gerçekleştirilmektedir. SSP-H serisinde diğer çark tiplerine göre daha yüksek verimliliğe sahiptir. Transfer edilecek akışkanın aşındırıcı özelliğine göre malzeme seçimi ile yüksek performanslı ve uzun ömürlü çözümler sunar. Büyük basma yüksekliklerinde yüksek verimlerde kullanılmaktadır.

Vortex Impeller

Vortex impellers are used in transfer of fluids containing large solid particles at low head. More life time is offered since large solid particles would have less contact area with the vortex impeller. These impellers are less efficient than the others.

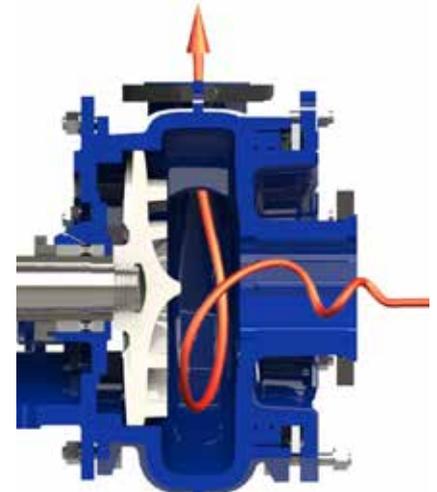

Full-Recessed Vortex Impeller

Full-recessed vortex impellers are applied when large, solid fibrous particles involved in handled fluid. It can pass that solids as large as discharge diameter. Minimum contact area is accomplished between solid particles in fluid and the impeller. These impeller types are preferred for preventing damages to solid particles in fluid. But it's shut-off head and efficiency are less than other type impellers. Applicable only on SSP H HC series pumps.

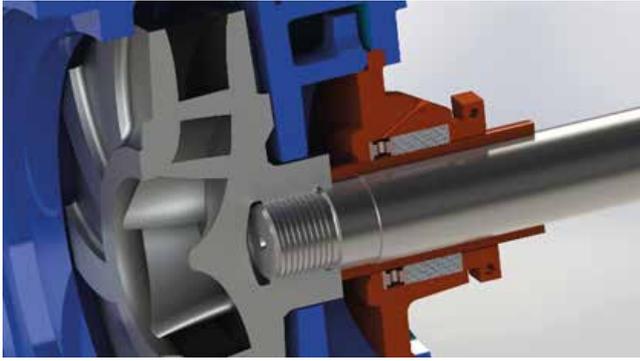

Semi-open Impeller

Large and medium solid particles are transferred with semi-open impeller type. It offers high efficient and more durable solutions regarding material selection and abrasive properties of the handled fluid. Semi-open impellers prevent greater efficient loss in use of larger particles. It is preferred low and medium heads.

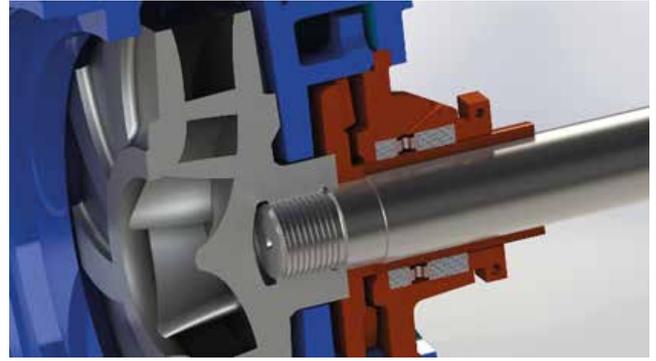

Shaft Sealing

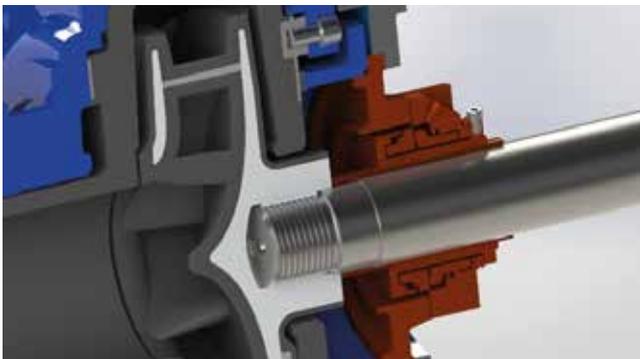

SSP HC, CR, CHC Packing Sealing

- Shaft sleeve and stuffing box sealing can be cooled and lubricated by an external cooling system or the pumping liquid.
- Distance adjustment between wear plate and back vanes of the impeller can set the pressure on sealing.

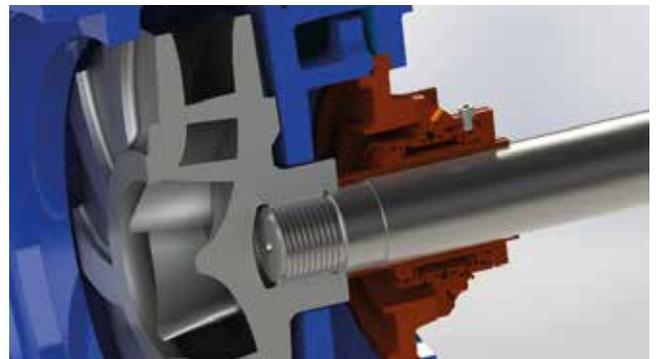

SSP HC, CR, CHC Hydrodynamic and Packing Sealing

- Hydrodynamic and shaft sleeve and stuffing box sealing can be cooled and lubricated by an external cooling system or the pumping liquid.
- Expeller provides hydrodynamic sealing by depressurizing on stuffing box area. It improves lifetime of shaft sleeve and packing sealing.

SSP HC, CR, CHC Cartridge Type Single Mechanical Sealing

- Hydraulic film between sealing surface elements is formed by pumping fluid or externally injected liquid which is the way of API 682 approved.
- Distance adjustment between wear plate and back vanes of the impeller can set the pressure on cartridge mechanical sealing.

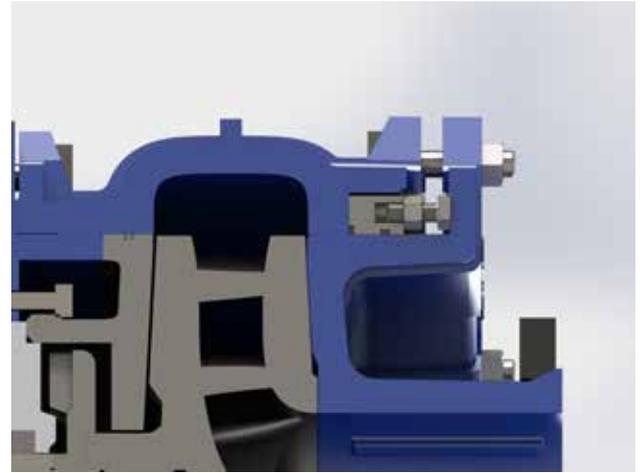

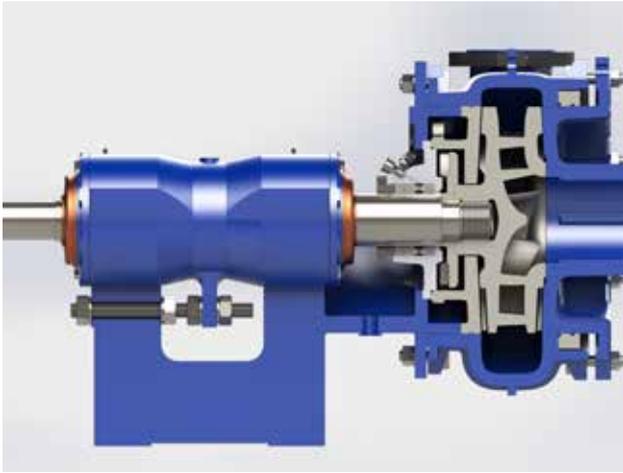

SSP HC, CR, CHC Cartridge Type Double Mechanical Sealing

- Hydraulic film between sealing surface elements is formed by a pressured barrier liquid externally which is the way of API 682 approved.
- Distance adjustment between wear plate and back vanes of the impeller can set the pressure on cartridge mechanical sealing.

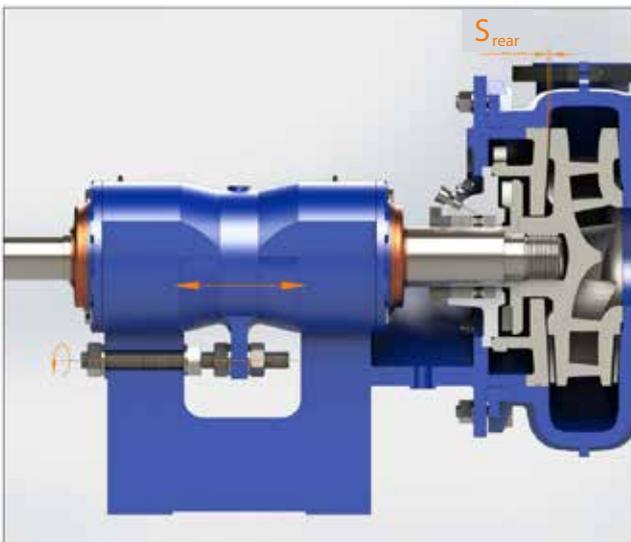

Adjustment Mechanism

General

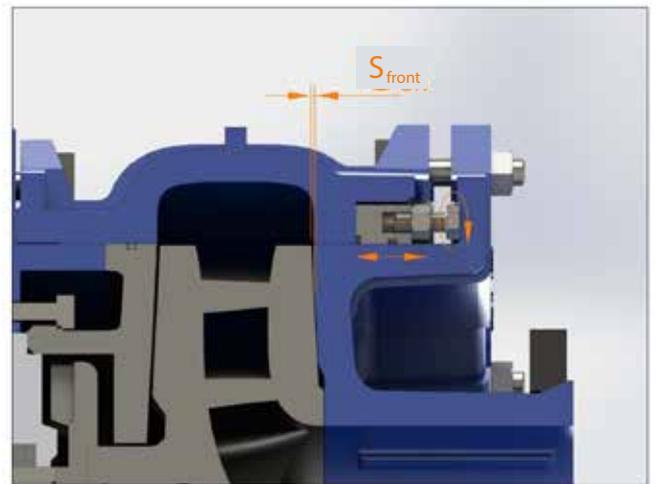

SSP-H pump series have major advantages to transfer fluid that has corrosive and abrasive properties. Even though these properties would have decrease pump performances in time, distance adjustment mechanisms on the SSP-H pump series can optimise the pump performances and improve service time. Only SSP-H HC pump series have two-way clearance adjustment system. SSP-H CHC and CR pump series have one-way clearance adjustment system.

Back-side Clearance

Stud bolts on bearing housing lead the movement of cartridge housing at SSP-H series HC/CR/CHC model pumps. Therefore distance between impeller and wear plate can be controlled. Back-side clearance adjustment keep the pump performance up even wearing happens between the wear plate and the impeller.

Front-side clearance

SSP-H series HC model pumps have front gap adjustment. Stop bolts in front of volute casing can set the gap between inlet port and impeller. Therefore negative effects of wearing optimise and service time of the pump improves. Besides that there is no need disassembly of volute casing and time is saved accordingly.

Sliding Base Frame Application

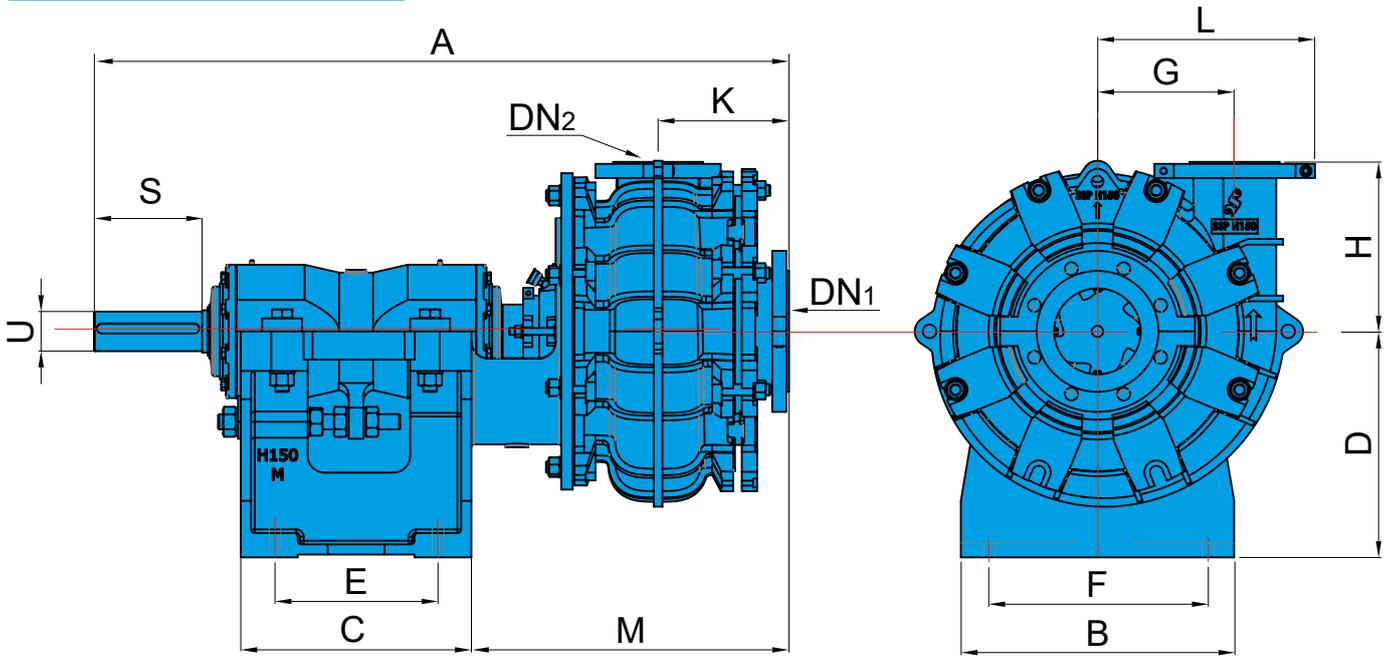

Base Plate Closed

Base Plate Open

SSP-H pump series can be application sliding base frame. The sliding base frame provides maintainability where there is no lift and no enough movement area. using sliding base frame instead of a fixed base has eliminated high risk manual handling and reduced downtime approximetely by %50. This reducation in downtime on the HC pump series are due to only having to unbolt the casing bolts to slide the wet end and motor apart to expose wear parts. Since CHC and CR pump series have split type, therefore these series pumps must be removed discharge flanges bolts and the casing bolts to slide the wet end and motor apart expose wear parts. Trapezoidal thread is used to slide the sliding base frame as standart. Wheeled system and hydraulic system applications can also be made.
